NoteLens: Rapid Note-Taking Tool

OVERVIEW

NoteLens is a note-taking program for Windows PCs.

NoteLens is a note-taking tool that is so fast, it lets you concentrate on your notes--not on the interface. You'll never spend time deciding where to store notes, where to save them, or how to name them. NoteLens takes care of that for you. With a lightning fast full-text indexing system, you can quickly find any note simply by typing any word--all notes containing that word will be pulled up as you type.

The software uses a standard graphical user interface which is novel in several ways:

It uses full-text indexing so that notes can be retrieved quickly based on a search for any word in any note.

It uses a finely tuned interface to make it efficient to enter and find notes.

It is integrated with Microsoft Outlook so notes can be synchronized, and therefore accessed on other devices that can sync with MS Outlook (such as PDAs and smartphones).

Because it works with Outlook, NoteLens also supports the importing of email and contacts.
