

## TECHNOLOGY

# QUIS™ (Questionnaire for User Interaction Satisfaction)

## OVERVIEW

The QUIS™ is an instrument which evaluates user satisfaction with the human-computer interface aspect of other software packages and computer systems. It has been standardized over a number of applications and research studies. The QUIS™ assesses six factors of overall reactions to a system and 21 components which contribute to usability. It can be used either in its current form or be modified to meet particular research needs. The QUIS™ includes three versions: paper, Windows, and Macintosh Spinnaker Plus™ stackware.

System Requirements: Macintosh and Windows versions available. 2 MB RAM and Helvetica font must be installed for proper text display. For more information visit <http://lap.umd.edu/quis/top.html>.
